

Naturally harvested, guaranteed organic

For over 25 years, thousands of users have taken advantage of the benefits of wild edible ABV freshly harvested, certified organic. In As a leader in the harvesting and processing wild algae we are proud to offer the best products and the highest quality to date.

Quality Assurance

We dehydrate our algae using a Bioactive method called dehydration. TM This method never heats above 40°C. As a result: algae can be considered original and retains intact all natural vitamins, enzymes and other Phyto nutrients. This method is particularly well suited to the preservation of the components sensitive to heat such as chlorophyll and enzymes.

Our SABV is guaranteed organic and kosher

We apply a quality assurance program total quality begins at harvest on the lake Klamath and continues at each stage of the production. This system ensures control of all raw materials as well as finished products.

Few companies in the industrial field can claim such a guarantee.

Isis Garden offers supplements natural food grade Based on scientific research and experience of its creator, **Jacques Prunier**.

The Energy of Life

Recommended consumption

4 capsules per day

- Promotes Rejuvenation

The power of life
in a capsule

Super Food / Simple Solutions

The Blue-Green Algae is the initial food of life on earth. BGA seaweed is considered essential to the food base of all life on earth. The **BGA** contains a large amount of easily absorbed nutrients.

Aphanizomenon FLOS AQUAE Nutritional Chart			
Vitamins		Minerals and Micronutrients	
Vitamin E Folic acid Vitamin K Biotin Niacin Choline Vitamin C	Thiamin B1 Riboflavin B2 B6 Pyridoxine Cobalamin B12 Thénique pantothenic acid, Provitamin A (beta-carotene)	Calcium Chloride Chrome Copper Iodine Iron Magnesium	Manganese Molybdenum Phosphorus Potassium Selenium, Sodium Zinc
Pigments and other nutrients		Essential Fatty Acids	
chlorophyll Beta-carotene, Phenylethylamine Canthaxanthin Glutathione phycocyanin		Alpha-linolenic acid (Omega-3) Linoleic acid (Omega-6)	

In addition to these vitamins, minerals, nutrients and fatty acids, GBA also provides :

- **Protein:** 60% of its weight in vegetable protein
- **sugar:** complex sugars that are a source of energy
- **Chlorophyll:** one of the most important natural tonics of the blood
- **Essential amino acids:** 11 essential amino acids and 9 other complementary amino acids

These micronutrients are essential to maintaining healthy body.

SECRET OF NATURAL HEALTH super GBA

The GBA has been used as a unique food supplement for over 20 years. The beneficial health effects of GBA are based on dozens of scientific

studies. It has been demonstrated that components of GBA have positive effects on :

- nerve cells and neurotransmitters
- cardiovascular health and cholesterol levels**
- optimal blood composition*
- stimulation of immune function

* : at normal levels.

Wild GBA is harvested in the upper Klamath Lake, fed by a natural network of rivers and mountain waterfalls, on volcanic soil with depths of 35 feet that are extremely rich in minerals and sediments.

The circulating water is continuously being renewed so that the whole lake is completely regenerated 4 times a year. This ecosystem is totally unique in its purity, therefore contributing to the development of this plentiful wild food called super GBA.

Consumers often report they are seeing an increase in energy, increased mental acuity, great serenity and emotional stability.

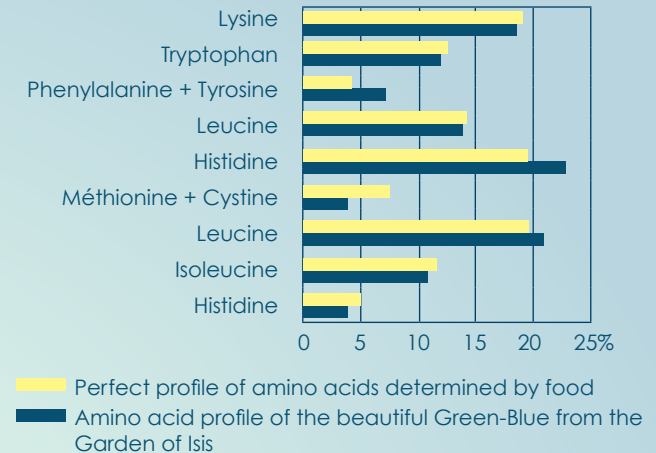

The GBA is also an ideal food supplement for animals of all shapes and sizes.

The perfection of Mother Nature cannot be reproduced in any laboratory.

In addition to this incredible variety of micro-nutrient composition, GBA provides essential amino acids close to the ideal composition for human health. This means that you will find all the essential amino acids in a single plant source that are readily absorbed.

The following diagram shows the high correlation of the amino acid composition in GBA with the ideal composition recommended by health authorities.

Comparison of the amino acids

Our food contains the ancient secret to good health. Phycocyanin, the blue pigment that gives color to the GBA is one of the most potent antioxidant plants in the world. Studies show that this nutrient is extremely powerful and especially valuable for maintaining the cerebral nervous system function.

SUPER ABV : The power of life in a capsule

A renowned expert talks about the GBA. Energetically speaking, each food (plant or animal) contains the qualities inherent in its environment. The GBA is no exception. It grows naturally and thrives in water that has pure minerals and other nutrients essential to our health. In addition: Klamath Lake is a sanctuary for several varieties of fish and wildlife. Worldwide, traditional communities have thought for thousands of years that foods from all lakes and water resources offer a wide range of contributions to health. The nutritional profile and current scientific research supports this traditional view of GBA. Science certifies the remarkable properties of this extraordinary product and this has been confirmed by the positive experiences of thousands of consumers (some using it for over 20 years).
